

MAXFLOW
HEATEXCHANGERS

About Company

Maxflow heat exchanger is established in order to build highest quality products in the heat exchanger field. We make sure that everything is precisely done according to guidelines and take every measure to provide the best services.

Standard quality material is used in manufacture of our products.

All the products are tested and marked safe for use. We are involved in both design and manufacture of heat exchange products

OUR PRODUCTS

1. Shell and Tube Oil Cooler.

The company is renowned for the manufacturing of this product. A strict and proper manufacturing method is followed to build this, therefore making it accurate and durable.

The features of this product are: -

Reliable: It is reliable because of the trusted method of manufacturing.

Durable: The product is durable as it is made with the highest quality material.

Plates: We don't compromise on the quality of the plates used, making it the best in the market.

2. Steam Radiator.

Our steam radiators are the best in business as they are highly efficient and long lasting. We provide options of both one-pipe and two-pipe steam radiator.

The features of this product are: -

Efficient: The steam radiators run for long time, meaning that they are highly effective.

Quiet Operation: The radiator is quieter than most other equipment in the market, making it a great choice.

Air Control: With this radiator you can control the heat distribution.

3. Air Oil Cooler.

As the name suggests, this cooler uses oil for cooling purposes. Our company manufactures this product with utmost precision. Our air oil coolers come in different variations according to the customer's needs.

The features of this product are: -

Size: Compared to other coolers in the market, air oil coolers are much smaller which makes it easy to use and portable.

Diversity: The air oil cooler is not confined to one particular industry, it can be used flexibly in any way as a cooler.

Efficiency: As they are used widely, it is a proof in itself that air oil coolers are very efficient.

4. Plate Type Heat Exchanger

This product uses metal plates to transfer between the fluids. As a result, it has an advantage over conventional heat exchangers. Our company boasts high quality plate heat exchangers.

The features of this product are: -

Material: Made from high quality stainless steel, our products are long lasting and reliable.

Weight: By reducing unnecessary weightage in the product, we have made it light and easy to transport.

Higher heat transfer: Our products are known for providing higher heat transfer in lesser time compared to most products in the market.

5. Tube Bundle.

We are leading suppliers of tube bundle as we produce with the best quality material. We supply replacement tube bundle to any existing system, making us a reliable choice.

Tube bundle can be customized according to the client needs and wants. Premium quality products along with guaranteed efficiency make us stand out in the business.
